HOW TO PROMOTE "STEM THINKING"

By simply allowing children to investigate and encouraging them to ask questions about the real world, you are engaging children in STEM.

A simple strategy to build confidence and make children feel like experts is to ask "what" questions rather than "why" questions. "Why" questions imply that there is a correct answer. "What" questions, on the other hand, focus on what they are noticing and doing.

Ask questions to your little researcher, encourage more investigation, and provide more opportunities to engage in these types of settings.

STEM education is part of Kiddie Academy's curriculum starting with infants!

With technology being an important pillar children are exposed to all four aspects of STEM.

STEM CAREERS

- Mechanical Engineer
- Medical Scientist
- Software Developer
- Financial Analyst
- Many, Many More
